Architecture

Security Architecture

Security architecture is a unified security design that addresses the necessities and potential risks involved in a certain scenario or environment. It also specifies when and where to apply security controls. The design process is generally reproducible.

Enterprise information security architecture (EISA)

Snippet from [Wikipedia](#): [Enterprise information security architecture](#)

Enterprise information security architecture is the practice of designing, constructing and maintaining information security strategies and policies in enterprise organisations. A subset of enterprise architecture, information security frameworks are often given their own dedicated resources in larger organisations and are therefore significantly more complex and robust than in small and medium-sized enterprises.
