 - [Configure](#)
 - [Monitor](#)

Configure activities fall under the operation side of DevOps. Once software is deployed, there may be additional IT infrastructure provisioning and configuration activities required.

Specific activities including:

- Infrastructure storage, database and network provisioning and configuring
- Application provision and configuration.

- [DevOps Plan](#)
- [DevOps Create](#)
- [DevOps Verify](#)
- [DevOps Packaging](#)
- [DevOps Release](#)
- [DevOps Configure](#)
- [DevOps Monitor](#)

The main types of solutions that facilitate these activities are continuous configuration automation, configuration management, and infrastructure as code tools. Notable solutions include Ansible, Chef, Puppet, Otter, and Salt.

- Infra as the code (Chef, Puppet or Ansible or Terraform)
