 - [Configure](#)
 - [Monitor](#)

Packaging refers to the activities involved once the release is ready for deployment, often also referred to as staging or Preproduction / “preprod”. This often includes tasks and activities such as:

- Approval/preapprovals
- Package configuration
- Triggered releases
- Release staging and holding

Notable solutions for this include universal package managers such as: Jfrog’s Artifactory, Sonatype Nexus repository, and Inedo’s ProGet.

Nuget

- Repository Management solutions (Artifactory, Nexus, etc.)
- * Containerization and Container management experience in multiple tools (OpenShift, Docker, Kubernetes, Kitematic)

https://en.wikipedia.org/wiki/Binary_repository_manager
