- [Roadmap](#)
- Stages
 - [Plan](#)
 - [Create](#)
 - [Verify](#)
 - [Packaging](#)
 - [Release](#)
 - [Configure](#)
 - [Monitor](#)

Verify is directly associated with ensuring the quality of the software release; activities designed to ensure code quality is maintained and the highest quality is deployed to production.

The main activities in this are:

- Acceptance testing
- Regression testing
- Security and vulnerability analysis
- Performance
- Configuration testing

Notable vendors and solutions for verify related activities generally fall under four main categories: Test automation (ThoughtWorks, IBM, HP), Static analysis (CAST, Parasoft, Microsoft, SonarSource), Test Lab (Skytap, Microsoft, Delphix), and Security (HP, IBM, Trustwave, FlawCheck).

- Knowledge of automated testing (Selenium, Visual Studio, etc.)
