Requirements analysis 3

Requirements analysis

See [Requirements management](#)

Snippet from [Wikipedia](#): [Requirements analysis](#)

In systems engineering and software engineering, **requirements analysis** focuses on the tasks that determine the needs or conditions to meet the new or altered product or project, taking account of the possibly conflicting requirements of the various stakeholders, *analyzing, documenting, validating and managing* software or system requirements.

Requirements analysis is critical to the success or failure of a systems or software project. The requirements should be documented, actionable, measurable, testable, traceable, related to identified business needs or opportunities, and defined to a level of detail sufficient for system design.
