AI, Copilot & ChatGPT at Microsoft Playlist

Source: [YouTube](#)Snippet from [Wikipedia](#): **Microsoft Copilot**

Microsoft Copilot is a chatbot developed by Microsoft and launched on February 7, 2023. Based on a large language model, it is able to cite sources, create poems, and write songs. It is Microsoft's primary replacement for the discontinued Cortana.

The service was introduced under the name **Bing Chat**, as a built-in feature for Microsoft Bing and Microsoft Edge. Over the course of 2023, Microsoft began to unify the *Copilot* branding across its various chatbot products, cementing the copilot analogy. At its Build 2023 conference, Microsoft announced its plans to integrate Copilot into Windows 11, allowing users to access it directly through the taskbar. In January 2024, a dedicated **Copilot key** was announced for Windows keyboards.

Like other chatbots, Copilot utilizes generative artificial intelligence technology, namely the Microsoft Prometheus model, built upon OpenAI's GPT-4 foundational large language model, which in turn has been fine-tuned using both supervised and reinforcement learning techniques. Copilot's conversational interface style resembles that of ChatGPT. The chatbot is able to communicate using numerous languages and dialects.

Microsoft operates Copilot on a freemium model. Users on its free tier can access most features, while priority access to newer features, including custom chatbot creation, is provided to paid subscribers under the "Microsoft Copilot Pro" paid subscription service. Several default chatbots are available in the free version of Microsoft Copilot, including the standard Copilot chatbot as well as Microsoft Designer, which is oriented towards using its Image Creator to generate images based on text prompts.

Bing Chat Enterprise

Microsoft Bing Chat Enterprise is a service that allows businesses to create and manage chatbots powered by Bing's natural language understanding (NLP) and generation capabilities.

With Bing Chat Enterprise, businesses can provide personalized and engaging conversational experiences for their customers, employees, and partners across various channels and platforms. Bing Chat Enterprise also offers tools and analytics to monitor and improve the performance and quality of the chatbots.

Your AI-powered chat for work **with commercial data protection**

Source: [YouTube](#)

AI-powered chat

- <https://www.microsoft.com/en-us/edge/bing/chat-enterprise>

Bing Chat Enterprise is available¹ via bing.com/chat and the Microsoft Edge sidebar at no additional cost² for customers who are licensed for Microsoft 365 E3, E5, Business Standard, and Business Premium.

Commercial data protection

User and business data is protected and will not leak outside the organization. You can be confident that chat data is not saved, Microsoft has no eyes-on access to it, and it is not used to train the models.

Because workplace chats might contain sensitive data, Bing Chat Enterprise is designed with commercial data protection in place to keep organizational data safe. With Bing Chat Enterprise, you can be confident in using AI-powered chat for work.

Bing Chat

Microsoft Bing Chat is a feature that allows users to interact with [Bing search engine](#) in a conversational way.

Users can ask questions, request information, generate content, and get suggestions from Bing using natural language. Bing Chat uses advanced natural language processing (NLP) and generation techniques to understand and respond to user messages. Bing Chat also supports multiple languages and modes, such as creative, precise, and balanced, to suit different user needs and preferences.

AI-powered chat

With the new Bing built into the [Microsoft Edge](#) sidebar, you can ask complex questions, find comprehensive answers, get summarized information, find inspiration to build upon all in a side-by-side view, with no need to flip between tabs.

Bing Image Creator

Microsoft Bing Image Creator is a feature that allows users to generate realistic images based on text descriptions. It uses advanced deep learning models to synthesize images that match the given text, such as “a cat wearing a hat” or “a sunset over the ocean”. Users can also modify the generated images by changing the text or adding more details. Microsoft Bing Image Creator is a useful tool for creating visual content, exploring ideas, or having fun with images.

AI-powered Image Generation

Image Creator helps you generate AI images with DALL-E right from the sidebar in Microsoft Edge. Given a text prompt, the AI will generate a set of images matching that prompt.

Microsoft Copilot

Microsoft Bing

Microsoft Bing is a web search engine that provides users with relevant and comprehensive results for their queries.

- <https://www.bing.com>

Bing uses advanced algorithms and artificial intelligence to analyze billions of web pages and deliver the most useful information to the users. Bing also offers various features and services, such as image search, video search, news, maps, translator, rewards, and more. Bing aims to empower users with knowledge and help them make better decisions.

AI-Powered Browser

Bing Chat

Microsoft Bing Chat is a feature that allows users to interact with [Bing search engine](#) in a conversational way.

Users can ask questions, request information, generate content, and get suggestions from Bing using natural language. Bing Chat uses advanced natural language processing (NLP) and generation techniques to understand and respond to user messages. Bing Chat also supports multiple languages and modes, such as creative, precise, and balanced, to suit different user needs and preferences.

Bing Chat Enterprise

Microsoft Bing Chat Enterprise is a service that allows businesses to create and manage chatbots powered by Bing's natural language understanding (NLP) and generation capabilities.

With Bing Chat Enterprise, businesses can provide personalized and engaging conversational experiences for their customers, employees, and partners across various channels and platforms. Bing Chat Enterprise also offers tools and analytics to monitor and improve the performance and quality of the chatbots.

Your AI-powered chat for work **with commercial data protection**

Source: [YouTube](#)

Bing Image Creator

Microsoft Bing Image Creator is a feature that allows users to generate realistic images based on text descriptions. It uses advanced deep learning models to synthesize images that match the given text, such as “a cat wearing a hat” or “a sunset over the ocean”. Users can also modify the generated images by changing the text or adding more details. Microsoft Bing Image Creator is a useful tool for creating visual content, exploring ideas, or having fun with images.

Microsoft Copilot

Microsoft Edge

Microsoft Edge is a web browser developed by Microsoft. It is the default browser for Windows 10 and Windows 11, and it is also available for other platforms such as macOS, iOS, Android, and Linux. Microsoft Edge is based on the Chromium open source project, which means it shares some features and compatibility with Google Chrome. Microsoft Edge offers a fast, secure, and personalized browsing experience. Some of its features include collections, vertical tabs, password monitor, immersive reader, web capture, and more. Microsoft Edge also supports extensions from the Microsoft Store and the Chrome Web Store.

Business Chat

Business Chat works alongside you, using the power of the Microsoft Graph to bring together data from across your documents, presentations, email, calendar, notes, and contacts. Bring together information from multiple sources to keep everyone on the team on the same page and moving forward together. Spend less time focused on the tools and more time focused on the most important work.

Copilot in Excel

Copilot in Excel works alongside you to help analyze and explore your data. Ask Copilot questions about your data set in natural language, not just formulas. It will reveal correlations, propose what-if scenarios, and suggest new formulas based on your questions – generating models based on the questions that help you explore your data without modifying it. Identify trends, create powerful visualizations, or ask for recommendations to drive different outcomes.

Copilot in Loop

What is Copilot in Loop?

Copilot in Loop is an AI-powered assistant that works alongside you in a chat pane, where you can enter your questions or requests and get suggestions and insights from Copilot. Whether you want to start a draft, rewrite your text, transform text into notes, tasks, or collaboration, or chat with Copilot about your Loop items, Copilot in Loop can help you do it faster and smarter.

Copilot combines the power of large language models (LLMs) with Loop to help you more easily compose content and collaborate with your peers.

Copilot in Outlook

Copilot in Outlook works with you in your inbox and messages so that you can spend less time on email triage and more time on communicating—better, faster, and more easily. Summarize lengthy, convoluted email threads with multiple people to understand not only what has been said, but the different viewpoints of each person and the open questions that have yet to be answered. Respond to an existing email with a simple prompt or turn quick notes into crisp, professional messages—pulling from other emails or content that you already have access to from across Microsoft 365.

Copilot in Power Apps

Copilot is now in Power Apps. Create and update Dataverse tables and create a beautiful, responsive, fully featured app by just expressing your idea. Copilot is for your app’s users too, to explore your data using a natural language interface. Copilot helps you build apps easier than ever before, and can be added to your existing apps to add modern natural language features too.

Copilot in Power BI

With Copilot in Power BI, we are infusing the power of large language models into Power BI at every layer to help users get more done and create more value from their data. Using Copilot, you can simply describe the visuals and insights you’re looking for and Copilot will do the rest. Users can create and tailor reports in seconds, generate and edit DAX calculations, create narrative summaries, and ask questions about their data, all in conversational language. With the ability to easily tailor the tone, scope and style of narratives and add them seamlessly within reports, Power BI can also deliver data insights even more impactfully through easy-to-understand text summaries.

Copilot in Power Virtual Agents

- See [Copilot Studio](#)

Copilot in Power Virtual Agents enables makers to design and modify bot topics with natural language. Bot builders can effortlessly describe their desired bot design and GPT will automatically transform it into a topic that can be continuously refined and optimized using natural language. Imagine It. Describe it, Power Virtual Agents builds it.

Copilot in PowerPoint

Copilot in PowerPoint helps you turn your ideas into stunning presentations. Your storytelling partner, Copilot can transform existing written documents into decks complete with speaker notes and sources or start a new presentation from a simple prompt. Condense lengthy presentations at the click of a button. Use natural language commands to adjust layouts, reformat text, and perfectly time animations.

Copilot in Teams Meetings

Copilot in Teams takes the work out of working together. Copilot helps you run more effective meetings, get up to speed on the conversation, organize key discussion points, and summarize key actions so that the entire group knows what to do next. In your chat, Copilot gets you answers to specific questions or catches you up on anything you’ve missed, all without interrupting the flow of discussion. And by adding Copilot to your meetings and conversations, you now have a powerful tool to help with common tasks.

Source: [YouTube](#)

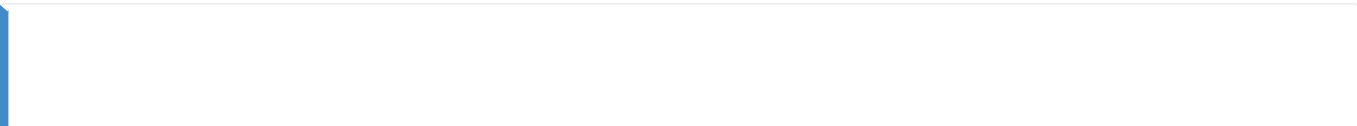

Intelligent Meeting Recap

Take the work out of working together with Copilot in Teams and Intelligent recap. Copilot in Teams builds on the highlights available from Intelligent recap (available in Teams Premium) by returning insights tailored to your unique prompts. Copilot helps you dig deeper into the meeting context by providing clarity on areas of disagreement, options to consider, where the team has aligned on a decision, and much more. Get more out of your meetings and stay in sync on what comes next.

Copilot in Viva Sales

Copilot in Viva Sales uses generative AI to revolutionize how sellers work. It showcases how to automatically create a customer-facing e-mail summarizing the key takeaways of a Teams meeting, including actions and next steps, and the ability to auto-generate content suggestions for use within customer email replies including a reply to an inquiry or a request for proposal.

Copilot in Word

Copilot in Word writes, edits, summarizes and creates right alongside you. With only a brief prompt, Copilot will create a first draft for you, bringing in information from across your organization as needed. Copilot can add content to existing documents, summarize text, and rewrite sections or the entire document to make it more concise.

Grounding

Grounding is the process of enriching [Large language model \(LLM\)](#) with information that is use-case specific, relevant, and not inherent in the LLM. By providing LLMs with the appropriate context and data, this procedure improves the quality, accuracy, and relevance of the resulting output.

What is Grounding? (M365 Copilot)

Grounding is a feature of Microsoft 365 Copilot that helps you write clear and concise sentences. It analyzes your text and suggests ways to simplify, shorten, or rephrase it. Grounding also checks for grammar, spelling, and punctuation errors. To use grounding, you can either select a sentence or a paragraph and click on the grounding icon in the toolbar, or you can enable the auto-grounding option in the settings. Grounding will then show you the original text and the suggested text side by side, and you can choose to accept or reject the changes.

Google Bard: What does grounding mean in M365 Copilot?

Grounding in M365 Copilot refers to the process of connecting the AI model to the user's business data. This is done through the Microsoft Graph, which is a real-time index of all the user's content and context in Microsoft 365.

Grounding allows Copilot to understand the user's specific needs and context, and to provide more relevant and accurate suggestions. For example, if the user is writing a document about a specific product, Copilot can access the user's product documentation and provide suggestions that are relevant to that product.

Grounding is an important part of what makes Copilot so powerful. It allows Copilot to be more than just a general-purpose AI assistant. It allows Copilot to be a truly helpful tool for users in the workplace.

Here are some of the benefits of grounding in M365 Copilot:

- More relevant suggestions: Copilot can provide more relevant suggestions because it understands the user's specific needs and context.
- More accurate suggestions: Copilot can provide more accurate suggestions because it has access to the user's business data.
- Improved productivity: Grounding can help users to be more productive by providing them with the information they need to get their work done faster and easier.
- Increased collaboration: Grounding can help users to collaborate more effectively by providing them with a shared understanding of the work that needs to be done.

Overall, grounding is a key feature of M365 Copilot that makes it a powerful and valuable tool for users in the workplace.

Microsoft Edge: What does grounding mean in M365 Copilot?

Grounding is an approach that Copilot uses to improve the specificity of the input prompt, so the user gets answers that are relevant and actionable to their specific task. Grounding involves using the information from the Microsoft Graph, such as the user's calendar, emails, chats, documents, meetings, and contacts, to enrich the prompt with additional context and details. For example, if the user asks Copilot to “write a summary of the project status”, grounding will add information such as the project name, deadline, progress, and stakeholders to the prompt before sending it to the large language model (LLM) for generation. This way, Copilot can produce a more accurate and useful response for the user based on their data in Microsoft 365 .

Security Copilot

Microsoft Security Copilot can augment security professionals with machine speed and scale, so human ingenuity is deployed where it matters most. Welcome to the new era of security.

Semantic Index

Semantic Index is a data map that helps [Microsoft Copilots](#) comprehend questions and give personalised responses.

What is Semantic Index? (M365 Copilot)

Semantic index is a map of your individual and company data that is created by Copilot. It is a core part of the [Copilot System](#), which is an AI-based work assistant that helps you with tasks like writing, presenting, searching, and more. Semantic index helps Copilot understand your data better and provide more relevant and personalized responses to your queries or prompts.

How does semantic index benefit Copilot users?

Semantic index enhances the [Enterprise Search \(Microsoft Search\)](#) results for Microsoft 365 E3 and E5 customers, whether they are using Copilot or not. For example, when you ask Copilot about the “March Sales Report”, it doesn't simply look for documents with those words in the file name or body. Instead, it understands that “sales reports are produced by Kelly on the finance team and created in Excel”. And it uses that conceptual understanding to determine your intent and help you find what you need. (see [NLP](#))

Semantic index also enables more conversational, multi-turn interactions with Copilot. For instance, you can ask follow-up questions like “Who edited it last?” or “How does it compare to February?” and Copilot will use the semantic index to keep track of the context and answer accordingly.

How can you enable semantic index for your organization?

Semantic index is a new capability in Microsoft 365 E3 and E5 that will start rolling out to customers 2023. To use semantic index, your organization must meet some technical requirements and have some features enabled.
