

Office 365

Project Nucleus

Project Nucleus, which you will see coming initially to [Microsoft Lists](#).

Project Nucleus will power the next generation of our web apps and portals. It will use intelligent sync to a database to keep a cache on the client that our web apps use to deliver a leapfrog in performance.

Project Nucleus will allow you to accomplish common tasks, like column sorting and grouping, at blazing fast speeds on lists of any size regardless of your Internet connection speed.

All changes are synced with the local cache so Project Nucleus will enable you to work even when offline! All changes made are uploaded when you reconnect to Internet.
