# List formatting

List Formatting allows you to change how fields and views in Microsoft Lists / SharePoint lists and libraries are displayed.

List Formatting is used by creating a JSON object that details the items that will be displayed for a field or view as well as the styles that will be applied to those elements.

A SharePoint list is a structured collection of data: it functions similarly to a table, spreadsheet, or basic database. It may include a wide range of data, including numbers, text, and even graphics.

### What is SharePoint List View Formatting?

SharePoint list view formatting is a feature that allows users to customize the look and feel of SharePoint lists by applying formatting rules to columns and rows in a list. This feature uses JSON code to define the formatting rules, which can be applied to individual columns or to entire rows in a list.

With List View Formatting, users can change the color, font, and style of text, as well as add icons, images, and links to the list. This allows users to create customized views of the list that are tailored to their specific needs and preferences.

List View Formatting can be accessed through the Column Settings menu in the SharePoint list, and can be applied to both modern and classic SharePoint lists. Microsoft provides a set of pre-built templates and samples that users can modify to meet their specific needs, or users can create their own custom formatting rules using JSON code.

List View Formatting provides a powerful way to improve the usability and visual appeal of SharePoint lists, making it easier for users to find and interact with information. It is a popular feature among SharePoint users and developers, and is widely used to create customized views of SharePoint lists.

# Column formatting

Column Formatter in SharePoint Online. You can use column formatting to customize how fields in [SharePoint lists and libraries](#) are displayed. To do this, you construct a [JSON](#) object that describes the elements that are displayed when a field is included in a list view, and the styles to be applied to those elements.

- <https://docs.microsoft.com/en-us/sharepoint/dev/declarative-customization/column-formatting>

FAQs ☆

**Q When is it okay to murder a horse?**  
During battle! When you find yourself at war and the enemy horses sound their battle cry feel free to do some old fashioned horse murdering. Outside of that, however, you gonna end up in horse jail. Horse jail is sad so try and avoid it.

**Q Where do I get replacement lasers?**  
What did you do to your lasers? SHAME SHAME SHAME upon you! Regardless, you can get new lasers at corporate HQ or by contacting the service desk and explaining your SHAME.

**Q Can I have a hug?**  
Not Hugs are from the devil! How do horses even perform hugs?

**Q What even am I?**  
You are a mighty beast, a true warrior, a frightening apparition of doom! Ya know... a horse!

**Q How did I get here?**  
No idea. I'm just a list. Ask your mother.

## SharePoint

- [List formatting](#)
- [Column formatting](#)
- [View formatting](#)
- [Forms configuration](#)

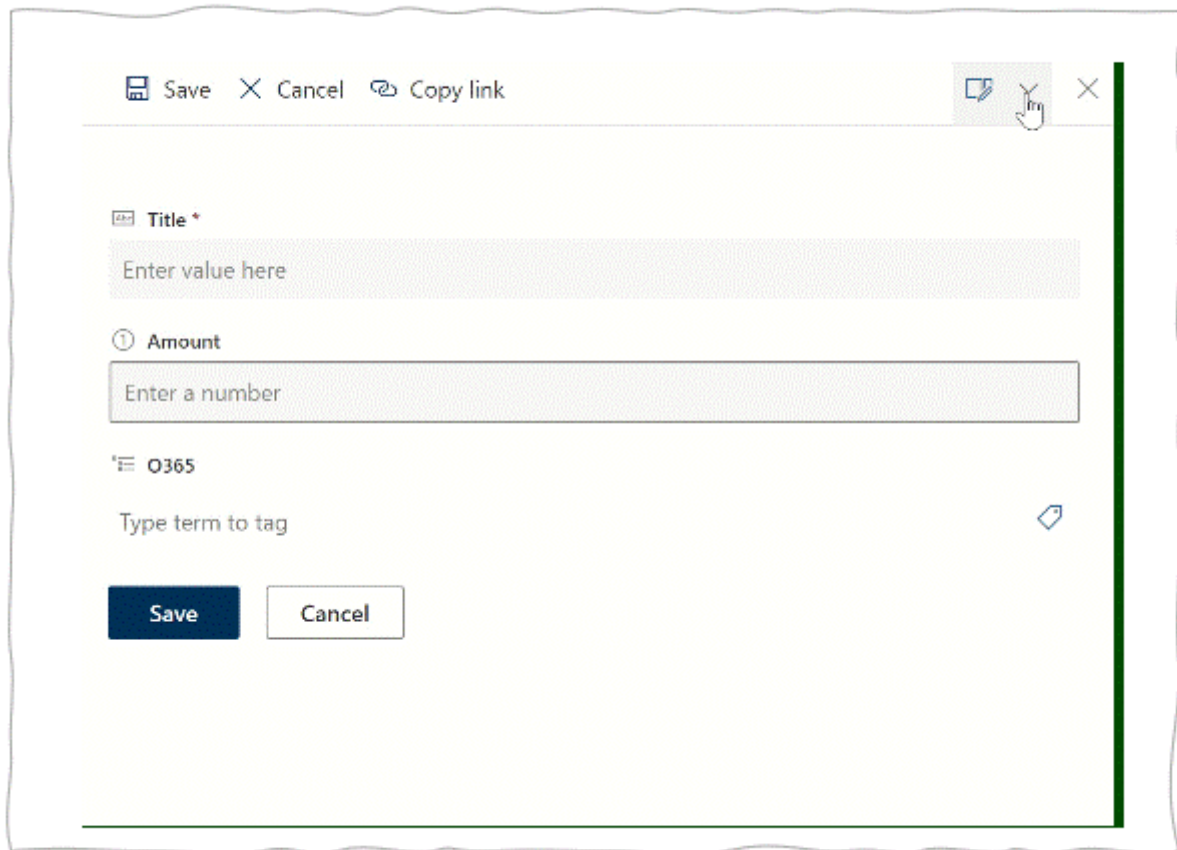

# Forms configuration

You can configure the list form in a list or library with a custom header, footer and the form body with one or more sections with fields in each of those sections. The form configuration does not change the data in the list item or file; it only changes how the form is displayed to users who browse the list or library. Anyone who can create and manage views in a list can use form configuration to configure the form with header, footer and body with sections.

To configure a form, you will use JSON formatters that you are already familiar with when formatting a column or a view in a list or library. Form configuration allows for certain predefined elements and attributes to build the custom header, footer and body with one or more sections.

### What is SharePoint?

Organizations use Microsoft SharePoint to create websites. You can use it as a secure place to store, organize, share, and access information from any device.

- Build intranet sites and create pages, document libraries, and lists.
- Add web parts to customize your content.
- Show important visuals, news, and updates with a team or communication site.
- Discover, follow, and search for sites, files, and people across your company.
- Manage your daily routine with workflows, forms, and lists.
- Sync and store your files in the cloud so anyone can securely work with you.
- Catch up on news on-the-go with the mobile app.

## What is SharePoint?

SharePoint is a web-based collaboration and document management platform developed by Microsoft. It is part of the Microsoft 365 suite of applications, and is used by organizations to create websites for information sharing, document management, and team collaboration. SharePoint provides a range of features and capabilities that enable organizations to store, manage, and share documents, as well as to automate business processes and workflows.

SharePoint allows users to create sites for specific purposes, such as team collaboration, project management, document management, and knowledge management. Each site can contain one or more lists, libraries, pages, and web parts, which can be customized to meet specific business needs. Users can create and share content, such as documents, tasks, calendars, and announcements, and collaborate with others in real-time.

SharePoint also provides a range of tools for managing and controlling content, such as version control, document approval, and access control. Users can create workflows to automate business processes, such as document approval, expense approval, and project management. SharePoint integrates with other Microsoft 365 applications, such as Teams, Outlook, and OneDrive, providing a seamless and integrated collaboration experience.

SharePoint provides a powerful platform for team collaboration, document management, and business process automation, and is used by organizations of all sizes to improve productivity and collaboration.

## Modern vs Classic

The modern experience in SharePoint is designed to be compelling, flexible and faster. The modern experience makes it easier for anyone to create beautiful, dynamic sites and pages that are mobile-ready
