What is SharePoint?

Organizations use Microsoft SharePoint to create websites. You can use it as a secure place to store, organize, share, and access information from any device.

- Build intranet sites and create pages, document libraries, and lists.
- Add web parts to customize your content.
- Show important visuals, news, and updates with a team or communication site.
- Discover, follow, and search for sites, files, and people across your company.
- Manage your daily routine with workflows, forms, and lists.
- Sync and store your files in the cloud so anyone can securely work with you.
- Catch up on news on-the-go with the mobile app.

Is SharePoint an Application or a Platform?

	Application	Platform
Design Strategy	Proprietary	Open
Competitive Strategy	Price/Feature	Ecosystem
Standardisation	Multiple	One
Importance to overall system	Helpful	Essential
Economic incentives focused on	Buyers	Developers

What is SharePoint?

SharePoint is a web-based collaboration and document management platform developed by Microsoft. It is part of the Microsoft 365 suite of applications, and is used by organizations to create websites for information sharing, document management, and team collaboration. SharePoint provides a range of features and capabilities that enable organizations to store, manage, and share documents, as well as to automate business processes and workflows.

SharePoint allows users to create sites for specific purposes, such as team collaboration, project management, document management, and knowledge management. Each site can contain one or more lists, libraries, pages, and web parts, which can be customized to meet specific business needs. Users can create and share content, such as documents, tasks, calendars, and announcements, and collaborate with others in real-time.

SharePoint also provides a range of tools for managing and controlling content, such as version control, document approval, and access control. Users can create workflows to automate business processes, such as document approval, expense approval, and project management. SharePoint integrates with other Microsoft 365 applications, such as Teams, Outlook, and OneDrive, providing a seamless and integrated collaboration experience.

SharePoint provides a powerful platform for team collaboration, document management, and business process automation, and is used by organizations of all sizes to improve productivity and collaboration.

Modern vs Classic

The modern experience in SharePoint is designed to be compelling, flexible and faster. The modern experience makes it easier for anyone to create beautiful, dynamic sites and pages that are mobile-ready

Column formatting

Column Formatter in SharePoint Online. You can use column formatting to customize how fields in [SharePoint lists and libraries](#) are displayed. To do this, you construct a [JSON](#) object that describes the elements that are displayed when a field is included in a list view, and the styles to be applied to those elements.

- <https://docs.microsoft.com/en-us/sharepoint/dev/declarative-customization/column-formatting>
- List formatting
- <https://pnp.github.io/List-Formatting/columnsamples/>

Examples:

- [SharePoint Column Formatting](#)

PnP GitHub Samples:

The image displays two examples of SharePoint list views with custom column formatting. The top example shows a list with columns: Description, Approval, Item Status, and Approval Action By. Each row contains an 'Item' label, followed by 'Approve' and 'Reject' buttons, and a 'Pending' button. The bottom example shows a list with a 'Color' column and a 'Comment' column. The 'Color' column contains smiley faces with colored backgrounds: Red, Green, Red, Yellow, Yellow, Red, Yellow, Red, Green. The 'Comment' column contains 'View Ent' for each row.

SharePoint

- [List formatting](#)
- [Column formatting](#)
- [View formatting](#)
- [Forms configuration](#)

Forms configuration

You can configure the list form in a list or library with a custom header, footer and the form body with one or more sections with fields in each of those sections. The form configuration does not change the data in the list item or file; it only changes how the form is displayed to users who browse the list or library. Anyone who can create and manage views in a list can use form configuration to configure the form with header, footer and body with sections.

To configure a form, you will use JSON formatters that you are already familiar with when formatting a column or a view in a list or library. Form configuration allows for certain predefined elements and attributes to build the custom header, footer and body with one or more sections.

- <https://docs.microsoft.com/en-us/sharepoint/dev/declarative-customization/list-form-configuration>
- <https://pnp.github.io/List-Formatting/formsamples/>

SharePoint

SharePoint Glossary

- <https://docs.microsoft.com/en-us/sharepoint/dev/general-development/sharepoint-glossary>

Term	Definition
access control entry	An entry in either a securable object's discretionary access control list (DACL) or an object's system access control list (SACL). In a DACL, the entry grants or denies permissions to a user or group. In a SACL, the entry specifies which security events to audit for a particular user or group or controls the Windows Integrity Level for the object.
access control list	In Windows-based systems, a list of access control entries (ACE) that apply to an entire object, a set of the object's properties, or an individual property of an object, and that define the access granted to one or more security principals.
access URL	The internal URL that is used by a crawler to identify and access an item.
ACE	An entry in either a securable object's discretionary access control list (DACL) or an object's system access control list (SACL). In a DACL, the entry grants or denies permissions to a user or group. In a SACL, the entry specifies which security events to audit for a particular user or group or controls the Windows Integrity Level for the object.
ACL	In Windows-based systems, a list of access control entries (ACE) that apply to an entire object, a set of the object's properties, or an individual property of an object, and that define the access granted to one or more security principals.
activity feed	A feed that provides information, notifications and updates based on people, documents, and tags you are following.
activity flow	A running instance of a workflow that consists of a sequence of action instances and/or activity model instances. Action instances and activity model instances can be sequenced in any order to create a single activity flow.
activity model	A predefined sequence of actions.
after event	An asynchronous event whose handler runs only after the action that raised the event is complete.
alert subscription	A request to receive an Internet message automatically when user-defined criteria are met. Such messages are generated automatically when items such as documents, webpages, list items, sites, or other resources on a server are changed.
alternate account	An additional user account that is in a different domain, but within the same forest as the primary account.
app catalog	A SharePoint document library that administrators can use to distribute apps for Office and SharePoint to their end users.
app custom action	A type of custom action that is added to a host site by a SharePoint Add-in (formerly an app for SharePoint) and that links to more functionality that is contained by the add-in.
app for SharePoint	A cloud-enabled app that integrates rich, scenario-focused content and services into a SharePoint environment. Now known as "SharePoint Add-in."
app part	A component of a SharePoint Add-in (formerly an app for SharePoint) that can be embedded on a site page to expose the functionality of the add-in.

Term	Definition
app web	A sub website to which the SharePoint components of an add-in are deployed when the add-in is installed on a host web.
application directory	The directory on an index server or a query server where all files are stored for the purpose of creating a full-text index catalog or performing queries on a full-text index catalog.
application session	The period of time when an application is running. When an application starts, the session starts. When an application quits, the session ends.
AppSource	Formerly known as Office Store. An Internet site that provides a collection of products and services developed by Microsoft partners for Microsoft Office users.
audience identifier	A GUID or string that is used to uniquely identify an audience.
audience rule	A set of logical conditions that determine whether a user profile can be a member of an audience.
authoritative page	A webpage that a site collection administrator has designated as more relevant than other webpages. This is typically the URL of the home page for the intranet of an organization. The higher the authority level assigned to a page, the higher the page appears in search results. Also referred to as authoritative page.
authority level	A floating-point number that designates that a specific webpage is more relevant than other webpages. Allowed values are 0, 1, or 2. Zero (0) signifies the most valuable authoritative page level.
authority page	A webpage that a site collection administrator has designated as more relevant than other webpages. This is typically the URL of the home page for the intranet of an organization. The higher the authority level assigned to a page, the higher the page appears in search results. Also referred to as authoritative page.
autohost	To deploy the components of an add-in on appropriate hosts and establish add-in isolation automatically.
available site template	An XML-based collection of predefined or user-defined settings that are stored as a site definition configuration or a site template, and can be used when creating a site.
backward signing	A condition of a handwritten signature, in an image or .ink file, that specifies the direction of the characters in the signature, right-to-left or left-to-right.
base view identifier	An integer that uniquely identifies a view definition for a list.
basic page	A web parts page that contains only one web part zone and, by default, a Content Editor web part.
BCS	A feature that enables users to interact with back-end (LOB) data from within the Office Suite and SharePoint.
BCS solution deployment	BCS server to client solution deployment that is based on ClickOnce technology.
before event	A synchronous event whose handler runs completely before the action that raised the event starts.
blank site	A site that was created by using the "Blank" site template.
Business Connectivity	A feature that enables users to interact with back-end (LOB) data from within the Office Suite and SharePoint.
Business Connectivity Services	A feature that enables users to interact with back-end (LOB) data from within the Office Suite and SharePoint.

Term	Definition
CAML	An XML-based language that is used to describe various elements, such as queries and views, in sites that are based on SharePoint products and technologies.
Central Administration site	A special SharePoint site where an administrator can manage all sites and servers in a farm that is running SharePoint products and technologies.
chrome control	An HTML and JavaScript based control that renders the top chrome, which is available to use in apps for SharePoint.
Collaborative Application Markup Language	An XML-based language that is used to describe various elements, such as queries and views, in sites that are based on SharePoint products and technologies.
content migration package	A package of XML-formatted files that is used to migrate content between site collections, sites, and lists.
content placeholder	A region within a page layout that is populated dynamically with the value of the publishing page field to which it is bound.
content type group	A named category of content types that is used to organize content types of a similar purpose.
content type identifier	A unique identifier that is assigned to a content type.
content type order	The sequence in which content types are displayed.
content type resource folder	A folder that stores the resource files that are associated with a content type.
content type schema	An XML definition that describes the contents of a content type.
content type specific view	A view that is associated with a particular content type that is associated with a folder.
context site	A site that corresponds to the context of the current request.
context type	A GUID that is used as a classification for an event receiver.
contextual search scope	A system-defined restriction that can optionally be added to a query to restrict the query results to items that are from a specific site or list.
crawl log	A set of properties that provides information about the results of crawling a display URL. The information includes whether the crawl was successful, the content source to which the display URL belongs, and the level, message, time, and identifier for any errors that occur.
crawl queue	A data structure that stores the list of items to crawl next.
crawled property	A type of metadata that can be discovered during a crawl and applied to one or more items. It can be mapped to a managed property.
cross-domain library	A JavaScript library available in apps for SharePoint to allow cross-domain client-level communication.
custom action	A dropdown menu item or ribbon component that is added to a site page.
Data View web part	A web part that is used to display items in a list.
declarative workflow association	A code-free binding of a declarative workflow to a specific list or content type using XAML (Extensible Application Markup Language).
default list view	The view of a list that is defined by the owner of the list to appear when users browse to the list without specifying a view.
default mobile list view	The view of a list that is defined by the owner of the list to appear when users browse to the list from a mobile device without specifying a view.
default search scope	The search scope that is assigned automatically to a search scope display group.
default user store	A user store supplied as a starting point for expanding group membership when a user store is not already specified in FAST Search Authorization.

Term	Definition
deployment system object	An object that is created as part of a site or site collection. Examples of deployment system objects are root folders, catalogs, default pages, and galleries that are created during site or site collection creation. A deployment system object is not part of a template.
descendant content type	Any content type that inherits from another content type.
dynamic rank	A component of the rank that depends on how well query text matches an indexed item.
excluded item	An item that is excluded from a crawl by the administrator of the host site or the search administrator of the crawler.
extracted definition	The definition that is obtained by an index server during a crawl, to identify if any sentences in the item match the pattern for defining a term.
extracted term	A term that an extracted definition applies to.
Farm Administrators group	A group of users that has permission to manage all the servers in a server farm. Members of the Farm Administrators group can perform command-line operations and all the administrative tasks in Central Administration for the server or server farm.
farm solution	A custom solution that can be deployed to a farm by a farm administrator. A farm solution has full access to system resources and other sites in the farm.
feature definition	An XML fragment that defines a feature and its attributes.
feature identifier	A GUID that identifies a feature.
feature property	A property that is associated with an active feature at a particular scope.
feature scope	The scope at which a feature can be activated.
federated location	A source that returns a set of search results for a given search query. The source can be a search service in the local server farm or another server farm, or another search engine that is compliant with the OpenSearch protocol.
federated location definition	The configuration settings that describe how to issue a query for a given federated location and display the search results.
field internal name	A string that uniquely identifies a field in a content type or a SharePoint list.
first-stage Recycle Bin	A container for items that are deleted. Items in this container are visible to users with the appropriate permissions and to site collection administrators.
FSA Manager	The Windows service that provides administration functionality for FAST Search Authorization.
FSA worker	The Windows service that generates user search security filters in FAST Search Authorization.
full-text index component	A set of files that contain all index keys that are extracted from a set of items.
generic list	A list whose base type is Generic List.
Group Approval document identifier	A string that uniquely identifies a document that is subject to the policies defined for a Group Approval workflow. The string is generated and assigned automatically to a document by a protocol server.
high confidence property	A managed property from the metadata index that the administrator identifies as a good indicator of a highly relevant item. It is used to produce a high confidence result.
high confidence result	A search result that is considered to be highly relevant because of a precise match between a high confidence property value and the tokens in the query text.

Term	Definition
high-trust app	An app that uses the server-to-server (S2S) protocol, where the app is responsible for creating the user portion of the access token, and therefore is trusted to assert any user identity.
host web	A SharePoint site to which an add-in is installed.
item identifier	An integer that uniquely identifies an item in a SharePoint list.
keyword consumer	A site collection that uses a particular set of keywords, synonyms, and Best Bets.
keyword synonym	An alternate phrasing of a particular keyword. When a user types a keyword synonym, search returns the same Best Bet result as the keyword.
language auto-detection	A process that automatically determines the language code identifier (LCID) for text in a document.
list folder	A folder that is contained within a SharePoint list. A list folder can contain documents or list items, and it retains the characteristics of other items in the list, such as a customizable schema.
list form	A page that allows users to create, view, or edit an item in a list.
List Form web part	A web part that is used to display, edit, or view an item in a list.
list identifier	A GUID that is used to identify a list in a site collection.
list item attachment	A file contained within a list item that is stored in a folder in the list with the segment "Attachments."
list item identifier	An integer that uniquely identifies an item in a SharePoint list.
list server template	A value that identifies the template that is used for a list.
list template	An XML-based definition of list settings, including fields and views, and optionally list items. List templates are stored in .stp files in the content database.
list template identifier	A GUID that is used to identify a list template.
list view page	A web part page that displays a view of a list.
List View web part	A reusable component that generates HTML-based views of items in a SharePoint list.
log level	The amount of information that is stored in a log file for a transaction. Log levels can be represented by numbers or by words from the most to the least verbose.
managed keyword	A word or phrase that is added to a SharePoint item, either as a value in the Managed Keyword column or as a social tag.
member group	A group of users that is specific to the User Profile service.
member group source	A qualified domain name, such as domain.corp.microsoft.com, that identifies the source of a member group.
Members group	A default group of users on a SharePoint site. By default, the Members group is assigned the Contribute permission level.
membership group record identifier	A unique identifier for a member group record.
metadata index	A data structure on a back-end database server that stores properties that are associated with each item, and attributes of those properties.
metadata schema	A schema that is used to manage information about an item.
Microsoft Business Connectivity Services	A feature that enables users to interact with back-end (LOB) data from within the Office Suite and SharePoint.
moderated object	An object for which a moderator reviews and either approves or rejects additions or changes to that object. New objects and changes to existing objects can be seen by other users only after they have been approved by the moderator.

Term	Definition
moderation status	A content approval status of an item in a list.
multivalue property	A property that can contain multiple values of the same variant type.
navigation structure	A hierarchical organization of links between related content, such as lists within a site.
new form	A form that allows for the creation of a list item.
Office SharePoint Server Search service	The farm-wide service that either responds to query requests from front-end web servers or crawls items.
Office Store	Now known as AppSource. An Internet site that provides a collection of products and services developed by Microsoft partners for Microsoft Office users.
Open Item permission	An authorization that allows a user to retrieve an entire file.
Open web permission	A requisite permission during the import or export of a SharePoint site.
operator account	The account of the user who is managing the import process for a deployment package.
organization identifier	An integer that uniquely identifies an organization.
orphaned object	A content database object that lacks a requisite relationship to a corresponding object.
paged view	A view that supports one or more visual pages. A paged view is used to break up large sets of data into smaller sets for increased performance and manageability.
parent farm	A farm that crawls content from another farm and also responds to query requests from that farm.
parent list	A list that contains a list item or list folder.
PerformancePoint Data Connections Library	A SharePoint document library that contains PerformancePoint data sources.
personal site	A type of SharePoint site that is used by an individual user for personal productivity. The site appears to the user as My Site.
portal content	The main search catalog, which contains content sources and settings that are related to a crawl.
principal aliasing	The process of mapping a user or a group in one user store to a user or a group in another user store for the purpose of returning all documents that the user or group has rights to view, regardless of which user store the user or group is authenticated to.
privacy level	A setting that specifies the category of users who are allowed to view the personal information of other users, such as user profile properties, colleagues, or memberships.
provisioned	A condition of an object that was created and deployed successfully.
public filter	The search security filter in FSA that finds documents that all users have access to.
publish to server	A process that facilitates saving a document or portions of a document to a web server.
published version	The version of a list item that is approved and can be seen by all users. The user interface (UI) version number for a published version is incremented to the next positive major version number and the minor version is zero.
publishing level	An integer that is assigned to a document to indicate the publishing status of that version of the document.
publishing page	A document that binds to a page layout to generate an HTML page for display to a reader. Publishing pages have specific fields that contain the content that is displayed in an HTML page.

Term	Definition
query independent rank	A system to rank items that uses features that do not vary with different queries.
query table	A two-dimensional table that presents data from an external data source.
ranking parameter	A value that is used to influence the algorithm that determines the rank of an item.
role identifier	An integer that uniquely identifies a role definition within a site.
role type	A predefined role definition.
root document	A document in the root folder of a site.
scheduled	A status that is applied to a list item or document that specifies a time when the item or document will be published or unpublished.
schema version	An integer value that represents the version number of the schema for a deployment package.
search application	A unique group of search settings that is associated, one-to-one, with a shared service provider.
search catalog	All the crawl data that is associated with a given search application. A search catalog provides information that is used to generate query results.
search database	A database that stores search-related information, including stored procedures and tables that are used for crawler data, document metadata, and administration information.
search query log	A record of information about user searches, such as search terms and time of access.
search scope consumer	A site collection that uses a particular search scope display group.
search scope display group	An ordered set of search scopes, defined by an administrator or programmatically, and used for returning groups of search scopes. Search scope display groups are saved for each search scope consumer and search scopes can be in multiple search scope display groups.
search scope index	A specialized component of a full-text index catalog that is built on the values of scoped properties for optimized queries.
search scope rule	An attribute that specifies which items are included in a given search scope.
search service account	A user account under which the search service runs.
search shared application object	An instance of a shared application for search that holds search-specific settings.
second-stage Recycle Bin	A container for items that have been deleted from a first-stage Recycle Bin. Items in a second-stage Recycle Bin are visible only to site collection administrators.
server-to-server protocol	An authentication protocol between two servers or services.
Shared Documents library	A document library that is included by default in the Team Site site template.
shared view	A view of a list or web part page that every user who has the appropriate permissions can see.
SharePoint Add-in	Formerly "app for SharePoint." A cloud-enabled add-in that integrates rich, scenario-focused content and services into a SharePoint environment.
SharePoint Search SQL syntax	The rules that govern the construction of an enterprise search SQL query.
single sign-on ticket	A token that contains the encrypted identity of a single sign-on (SSO) user in the form of a security identifier string and a nonce.
site collection administrator	A user who has administrative permissions for a site collection.

Term	Definition
site collection flag	A 4-byte unsigned integer bit mask that specifies the properties that are global to a site collection. One or more values can be set for this bit mask.
site collection identifier	A GUID that identifies a site collection. In stored procedures, the identifier is typically @SiteId or @webSiteId. In databases, the identifier is typically SiteId/tp_SiteId.
site collection quota	An option for a site collection that allows administrators to set levels for maximum storage allowed, maximum number of users allowed, and warnings that are associated with the maximum levels.
site column	A field that can be associated with a content type or list within a site or site collection.
site content type	A named and uniquely identifiable collection of settings and fields that store metadata for lists within individual sites.
site definition	A family of site definition configurations. Each site definition specifies a name and contains a list of the site definition configurations.
site definition configuration	An XML-based definition of lists, features, modules, and other data, that collectively define a type of SharePoint site. Site definition configurations are stored in the ONET.xml file.
site definition version	A zero-based integer that indicates the version number of the site definition. Every time a site definition is updated, it is suggested that the version number be increased.
site flag	A 4-byte unsigned integer bit mask that specifies properties that are unique to a site.
site identifier	A GUID that is used to identify a site in a SharePoint site collection.
site membership	The status of being a member of a site and having a defined set of user rights for accessing or managing content on that site.
site property	A name/value pair of strings that serves as metadata for a site, such as the title or default language.
site solution	A deployable, reusable package that contains a set of features, site definitions, and assemblies that apply to sites, and that can be enabled or disabled individually.
site template	An XML-based definition of site settings, including formatting, lists, views, and elements such as text, graphics, page layout, and styles. Site templates are stored in .stp files in the content database.
start address	A URL that identifies a point at which to start a crawl. Administrators specify start addresses when they create or edit a content source.
static rank	The component of a rank that does not depend on the search query. It represents the perceived importance of an item and may be related to the origin of the item and relationships between the item and other items or business rules that are defined in the search application.
trusted authentication	A mechanism whereby a user account or a process account can be used to perform operations on behalf of the current user.
trusted subsystem	A method of communication in which two-way trust is established between two server components. Each server component communicates with the other component by using an account that is authorized to perform privileged actions such as retrieving files and settings.
UI culture	The language that is used to display strings and other graphical elements in a user interface.
user display name	A user profile property that can contain the preferred name of a user.
user profile change entry log	A repository that logs all the changes that take place in a user profile.

Term	Definition
user profile change event	An event that occurs when a property of any user profile is changed.
user profile import	The process of importing records from a directory service to the user profile store.
user profile record identifier	An integer that uniquely identifies a user profile record.
user profile store	A database that stores information about each user profile.
user search security filter	The user search security filter that specifies group and user permissions for a specific FAST Search user. FAST Search Authorization (FSA) filters out inappropriate search results by intersecting the user's query with the user's search security filter, and checking each document's access control list to determine if the user has permission to view that document. The user search security filter is FSA's primary means of enforcing document-level security ("security trimming"), which helps to ensure that search results display only documents that the user has permissions to read.
user store	A logical grouping of users, groups, and content permissions for a third-party security or content system that is accessed by FAST Search Authorization.
visible scope	A search scope that is displayed to site collection administrators and users.
Visitors group	A default group of users on a SharePoint site. By default, the Visitors group is assigned the Read permission level.
web application identifier	A GUID that identifies a web application.
web control	A server-side component that encapsulates user interface and related functionality.
web discussion comment	An individual comment that is added within a web discussion.
web identifier	A GUID that is used to identify a site in a SharePoint site collection.
web part cache	A hash table of key/value pairs that is used to cache and locate internal information for web parts.
web part chrome state	The condition of a web part and the web part chrome surrounding it. Possible values are zero (0) for normal state or one (1) for minimized state.
web part connection	An element in a web parts page that defines a provider-consumer data relationship between two web parts. When a web parts page is rendered, data provided by one web part can affect how and what is rendered by the other web part.
web part identifier	A GUID that identifies a web part.
web part property	A configurable characteristic of a web part that determines the behavior of the web part.
web part type identifier	A unique 16-byte value that is assigned to each web part type.
web part zone identifier	A string that identifies a web part zone on a web parts page.
web part zone index	An integer that specifies the relative position of a web part in a web part zone. web parts are positioned from the smallest to the largest zone index. If two or more web parts have the same zone index, they are positioned adjacent to each other in an undefined order.
web proxy	A method exposed in a client object model to issue requests from SharePoint to a remote service that developers can use in apps for SharePoint.
web service method	A procedure that is exposed to web service clients as an operation that can be called on the web service.
work item process	A process that runs a work item.
work item type identifier	A GUID that is used to identify a work item type.

Term	Definition
workflow association	An association of a workflow template to a specific list or content type.
workflow configuration file	An implementation-specific file that is a part of a workflow. The workflow configuration file contains information that is necessary to create a workflow template from the specified workflow markup and rules files, and to associate it to a specific list.
workflow history item	A list item that stores information about the current status of, and past actions for, a document or item that is associated with a workflow.
workflow history list	A list that stores the history of actions or tasks for a business process.
workflow identifier	A GUID that is used to identify a workflow.
workflow markup file	A file that contains markup to specify the functional behavior of a workflow.
workflow task	An action or task in a sequence that is related to a built-in or user-defined business process.
workflow task list	A list that stores the sequence of actions or tasks for a business process.
zero-based index	An index in which the first item has an index of zero.

Hub sites

- <https://docs.microsoft.com/en-us/sharepoint/dev/features/hub-site/hub-site-overview>
- compare to subsite
- Associated hub - (hub to hub) To be released... not in roadmap?!
 - Associates a hub site to a hub site
 - [Add-SPOHubToHubAssociation](#)

What is SharePoint Hub sites?

SharePoint Hub sites are a feature in SharePoint that allows organizations to create a cohesive navigation and branding experience across associated sites. Hub sites enable you to:

- Organize related sites together for easier management and discoverability.
- Share common navigation, branding, and site themes across multiple sites.
- Aggregate news and activity from associated sites into a central hub.

To create a Hub site, you need to have a SharePoint site that you can register, typically a modern team or communication site. Once registered as a Hub site, you can associate other sites with it, allowing users to navigate seamlessly among them.

Key features of Hub sites include:

- **Navigation Synchronization:** The top navigation menu can be unified for all associated sites, providing a consistent user experience.
- **Custom Branding:** Each Hub site can have its own logo, color scheme, and theme, which will be inherited by associated sites.
- **Search and Discovery:** Users can easily find content from the Hub and its associated sites, making information more accessible.
- **News and Activity Rollup:** The Hub site can display news and activities from associated sites in a consolidated view, helping keep users informed.

Hub sites help improve collaboration and consistency within organizations by creating structured areas for content and communication. They are particularly useful for teams that manage multiple sites focused on similar projects or topics.

SharePoint

- [List formatting](#)
- [Column formatting](#)
- [View formatting](#)
- [Forms configuration](#)

List formatting

List Formatting allows you to change how fields and views in Microsoft Lists / SharePoint lists and libraries are displayed.

List Formatting is used by creating a JSON object that details the items that will be displayed for a field or view as well as the styles that will be applied to those elements.

A SharePoint list is a structured collection of data: it functions similarly to a table, spreadsheet, or basic database. It may include a wide range of data, including numbers, text, and even graphics.

What is SharePoint List View Formatting?

SharePoint list view formatting is a feature that allows users to customize the look and feel of SharePoint lists by applying formatting rules to columns and rows in a list. This feature uses JSON code to define the formatting rules, which can be applied to individual columns or to entire rows in a list.

With List View Formatting, users can change the color, font, and style of text, as well as add icons, images, and links to the list. This allows users to create customized views of the list that are tailored to their specific needs and preferences.

List View Formatting can be accessed through the Column Settings menu in the SharePoint list, and can be applied to both modern and classic SharePoint lists. Microsoft provides a set of pre-built templates and samples that users can modify to meet their specific needs, or users can create their own custom formatting rules using JSON code.

List View Formatting provides a powerful way to improve the usability and visual appeal of SharePoint lists, making it easier for users to find and interact with information. It is a popular feature among SharePoint users and developers, and is widely used to create customized views of SharePoint lists.

List Formatting

- [List formatting](#)
- [Column formatting](#)
- [View formatting](#)
- [Forms configuration](#)

You can use List Formatting to customize how fields and views in SharePoint lists and libraries are displayed.

List Formatting is applied by constructing a [JSON](#) object that describes the elements that are displayed for a field or view and the styles to be applied to those elements.

Microsoft 365 Assessment tool

- [Microsoft 365 Assessment tool](#)

What is Microsoft 365 Assessment tool?

The Microsoft 365 Assessment tool is an open source tool that provides customers with data to help them with various deprecation and adoption scenarios. Currently the tool supports a Microsoft Syntex adoption and Workflow 2013 module but additional modules are under development.

Overtime the Microsoft 365 Assessment tool will replace the relevant [SharePoint Modernization Scanner](#) modules, for the time being the Modernization Scanner should be used if the needed module is not available as part of the the Microsoft 365 Assessment tool.

Pages

What is SharePoint Pages?

SharePoint pages are a feature within Microsoft SharePoint that allow users to create and share content on a SharePoint site. These pages can display various types of information, such as text, images, videos, and documents, and can be customized using web parts, which are building blocks that add different functionalities. There are different types of pages, including modern pages, classic pages, and wiki pages, each offering unique customization options. SharePoint pages are designed to facilitate collaboration and information sharing among team members, making it easier to organize and present data in a user-friendly manner.

mindmap root((SharePoint Pages)) Definition Web pages in SharePoint Display content and information Types Site Pages Wiki Pages Web Part Pages Features Text Images Web Parts Layouts Tools SharePoint Online Modern Page Editor Best Practices Consistent layout Use web parts effectively Optimize for performance Challenges User training Content management Design consistency

- Create & edit
- Web parts & apps
- Masterpages
- .aspx (architecture)
- Working with pages using Power Automate
- Working with pages using PowerShell
- Working with pages using Microsoft Graph

SharePoint offers several types of pages, each designed for different purposes:

- **Modern Pages:** These are user-friendly and highly customizable, allowing you to add various web parts like text, images, and documents. They are responsive and work well on mobile devices.
- **Classic Pages:** These are the traditional type of pages in SharePoint, offering a familiar interface for those who have used SharePoint for a long time. They provide a range of customization options but are less flexible than modern pages.
- **Wiki Pages:** These pages are designed for collaborative content creation. They allow users to add and edit content easily, making them ideal for creating knowledge bases or documentation.
- **Publishing Pages:** These are used in publishing sites and are designed for creating and managing content that needs to go through an approval process before being published.

SharePoint

PnP Modern Search

The PnP Modern Search solution is a set of SharePoint Online modern Web Parts that covers both [SharePoint](#) and [Microsoft Graph](#).

- <https://microsoft-search.github.io/pnp-modern-search/>

Component	Description
Search Results	Retrieve data from a data source and render them in a specific layout.
Search Filters	Filter and refine data displayed in 'Search Results' Web Parts.
Search Verticals	Browse data as silos (i.e. tabs) from multiple data sources.
Search box	Let users enter free text queries sent to 'Search Results' Web Parts.

Search Verticals

What is SharePoint Search Verticals?

Search verticals are tabs on the search result page that show results of a specific type or from select sources. For example, the Files vertical shows results classified as files and makes it easy for users who are looking to find documents. You can customize verticals in Microsoft Search to meet the needs of your organization or individual departments. Microsoft Search has two types of verticals, out of the box or default and custom verticals. The default verticals, such as All, Files, and People, create easy access to the most commonly used search results.

SharePoint

SharePoint Advanced Management (SAM)

Microsoft Syntex - SharePoint Advanced Management is a Microsoft 365 add-on that provides a suite of features that can help you:

- Manage and govern SharePoint and OneDrive
- Enhance Microsoft 365 secure collaboration capabilities

SharePoint Advanced Management features are administered by SharePoint administrators in the SharePoint admin center. Some features can be used by site owners.

- more... <https://learn.microsoft.com/en-us/sharepoint/advanced-management>

What is SAM?

SharePoint Advanced Management is a Microsoft 365 add-on that provides a suite of features that can help you manage and govern SharePoint and OneDrive. It enhances Microsoft 365 secure collaboration capabilities. SharePoint Advanced Management features are administered by SharePoint administrators in the SharePoint admin center. Some features can be used by site owners. The add-on provides advanced access policies for secure content collaboration, restricted access control for SharePoint sites, restricted access control policy for OneDrive, data access governance insights for SharePoint sites, conditional access policy for SharePoint sites and OneDrive, secure SharePoint document libraries, and block download policy for SharePoint sites and OneDrive

SharePoint

SharePoint Designer

Discontinued

Application design program used to build and customize SharePoint sites and applications.

Snippet from [Wikipedia](#): [Microsoft SharePoint Designer](#)

Microsoft SharePoint Designer (SPD), formerly known as **Microsoft Office SharePoint Designer**, is a discontinued HTML editor freeware for creating or modifying Microsoft SharePoint sites, workflows and web pages. It is a part of Microsoft SharePoint family of products. SharePoint Designer 2007 is a part of Microsoft Office 2007 family, but is not included in any of the Microsoft Office suites. SharePoint Designer 2013 is the last version of this product.

SharePoint Modernization Scanner

- [Getting started with the SharePoint modernization scanner](#)

What is SharePoint modernization scanner?

SharePoint Modernization scanner you can prepare your classic sites for modernization. The scanner will help you prepare for the following modernization efforts:

- Optimizing the usage of modern list and libraries
- Connecting these sites to a Microsoft 365 group
- Modernizing the wiki and web part pages by creating modern site pages
- Rebuilding classic publishing portals as modern publishing portals
- Understanding where InfoPath is being used
- Understanding the usage of classic blog pages

This scanner is a key tool to use if you want to prepare for modernizing your classic sites as it will give you factual data about how easy it is to modernize your sites. Using the dashboards generated by the scanner you'll be able to drill down on the "modernization readiness" of your sites and plan the needed remediation work where needed.

SharePoint Modernization Scanner (version 2.14.0.0)

Configure authentication for the scan
Use this wizard to configure the options for your scan

PnP CORE MODERNIZATION

Selected authentication option: Azure AD App Only (preferred)

Azure AD Application ID: B196A442-22DE-4903-BB11-242A1F5B7D31

Azure AD Domain name: contoso.onmicrosoft.com

Certificate (PFX) file: c:\certs\azureapponly.pfx

Password for the PFX file:

Authentication region: Production

Click [here](#) for more information on setting up Azure AD App Only authentication
Click [here](#) for more information on setting up Azure ACS App Only authentication

SharePoint News Roadmap

SharePoint: Auto-News Digest

SharePoint Auto-News Digest sends automated email to employees in your company about the latest News posts that they have not yet read. Using Microsoft intelligence, a curated selection of News posts are shared with employees through an email that comes from SharePoint. This is a great way for employees to catch up on News that they may have otherwise missed. Only published news posts

are sent in the digest, and employees will have access to all the news posts that they are sent so rest assumed that employees won't see news that they don't have permission to see. If employees want to opt-out of receiving the Auto-News Digest, they can click the unsubscribe button at the bottom of the email.

SharePoint: Company-Branded Auto News Digest

For SharePoint news users, we are launching an update to the Auto-News Digest feature. Now users will receive a company branded Auto-News Digest.

SharePoint

SharePoint Search Query Tool

- <https://github.com/pnp/PnP-Tools/releases>
- <https://github.com/pnp/PnP-Tools/tree/master/Solutions/SharePoint.Search.QueryTool>

Use this tool to test out and debug search queries against the SharePoint 2013/2016/2019/Online Search REST API.

Learn how to build an HTTP GET/POST query, and how the different parameters should be formatted.

- Marketplace (3rd party)

SharePoint Knowledge Areas

- **Collaboration:** SharePoint provides tools for team collaboration, including document management, discussion forums, wikis, calendars, and task lists. These features help teams to work together efficiently and share information in a secure and organized way.
- **Content Management:** SharePoint provides robust content management capabilities, including versioning, check-in/check-out, and approval workflows, that enable organizations to manage documents and other content effectively.
- **Business Process Automation:** SharePoint can automate business processes by providing workflows that automate tasks, send notifications, and initiate actions based on specific conditions or events.
- **Search:** SharePoint includes a powerful search engine that allows users to quickly find relevant information across the platform. It also provides tools for customizing search results and refining search queries.
- **Business Intelligence:** SharePoint provides tools for creating and sharing reports, dashboards, and scorecards that help organizations analyze and visualize data.
- **Social Collaboration:** SharePoint provides social collaboration features, including blogs, wikis, discussion forums, and social networking features that help teams to share information and collaborate in real-time.
- **Customization:** SharePoint provides tools for customizing the platform to meet specific business needs, including the ability to create custom workflows, web parts, and applications.
- **Administration and Security:** SharePoint provides tools for managing the platform, including user and group management, permission levels, and site collection management. It also includes features for securing data and ensuring compliance with regulatory requirements.
- **Records Management:** SharePoint includes features for managing records, including retention policies, legal holds, and e-discovery capabilities. These features help organizations to manage records in compliance with regulatory requirements.
- **Project Management:** SharePoint provides tools for managing projects, including project sites, task lists, and Gantt charts. These features help project teams to collaborate and manage projects effectively.
- **Forms and Workflow:** SharePoint includes tools for creating and managing forms, as well as workflows that automate business processes. These features enable organizations to streamline processes and increase efficiency.
- **Document Collaboration:** SharePoint enables users to collaborate on documents in real-time, providing features such as co-authoring, version control, and document check-in/check-out.
- **Integration:** SharePoint integrates with other Microsoft products, including Office 365, Teams, Power BI, and Dynamics 365. It also provides integration with third-party applications through APIs and web services.
- **Mobile Access:** SharePoint provides mobile access to content and features, allowing users to access information and collaborate with team members from anywhere and on any device.
- **Migration and Upgrades:** SharePoint provides tools and guidance for migrating content from other platforms, as well as upgrading to new versions of SharePoint. These features help

organizations to keep their SharePoint environments up-to-date and ensure compatibility with other Microsoft products.

- **Governance:** SharePoint governance involves defining policies, procedures, and guidelines for managing the platform, including site creation, permissions, and content management. It also includes establishing roles and responsibilities for managing the platform.
- **User Adoption:** SharePoint user adoption involves encouraging users to adopt the platform and use it effectively. This requires providing training, support, and resources to help users understand the benefits of SharePoint and how to use its features.
- **Branding and Customization:** SharePoint provides tools for branding and customizing the user interface, including the ability to create custom themes, templates, and master pages. This enables organizations to create a consistent look and feel across their SharePoint sites.
- **Business Connectivity Services:** SharePoint provides tools for connecting to external data sources, including SQL Server, Oracle, and SAP. This enables organizations to access and interact with data from external systems within SharePoint.
- **Enterprise Content Management:** SharePoint provides features for managing enterprise content, including document management, records management, and web content management. This enables organizations to manage all types of content in a unified platform.
- **Web Content Management:** SharePoint provides tools for managing web content, including publishing pages, web parts, and site navigation. This enables organizations to create and manage websites within SharePoint.
- **Compliance and Security:** SharePoint includes features for ensuring compliance with regulatory requirements and securing data. This includes features such as information rights management, data loss prevention, and multi-factor authentication.
- **Analytics:** SharePoint provides tools for tracking and analyzing usage and performance data. This includes features such as usage reports, audit logs, and health monitoring, enabling organizations to monitor the health and performance of their SharePoint environment.
- **Development:** SharePoint provides tools and guidance for developing custom solutions, including web parts, workflows, and apps. This enables organizations to extend SharePoint and build custom solutions to meet their specific business needs.

SharePoint Building Blocks

- **Sites:** Sites are the basic building blocks of SharePoint, where users can create and manage content, collaborate with others, and store documents and files. Sites can be customized with various features and templates to meet specific business needs.
- **Lists:** Lists are collections of data that can be used to track information, such as tasks, issues, or contacts. Lists can be customized with columns and views to display and organize data in various ways.
- **Libraries:** Libraries are collections of documents and files that can be stored and shared within SharePoint. Libraries can be customized with metadata and workflows to manage documents and automate business processes.
- **Web Parts:** Web Parts are customizable components that can be added to SharePoint pages to display information and functionality. Web Parts can be customized with various settings and properties to meet specific business needs.
- **Workflows:** Workflows are automated processes that can be used to streamline business processes and improve efficiency. Workflows can be customized to automate tasks, such as document approval or notification, and can be triggered by various events.
- **Site Navigation:** Site Navigation is a feature of SharePoint that enables users to navigate and explore SharePoint sites. Site Navigation can be customized to meet specific business needs, and can include links to pages, libraries, lists, and other types of content.

- **Pages:** Pages are the building blocks of SharePoint sites. Pages can be customized using web parts, page layouts, and master pages, and can be used to display content and functionality within SharePoint.
- **Forms:** Forms are customizable templates that can be used to collect and manage data within SharePoint. Forms can be customized with various fields and validation rules to ensure data accuracy.
- **Templates:** Templates are pre-built site designs that can be used to quickly create sites with specific features and functionality. Templates can be customized to meet specific business needs.
- **Search:** Search is a powerful feature of SharePoint that enables users to find content and information within SharePoint. Search can be customized with various settings and filters to provide a tailored search experience.
- **Security:** Security is an important building block of SharePoint, which includes features for managing access to content and data within SharePoint. Security can be customized with various permissions and roles to ensure that users have access to the appropriate content and functionality.
- **Content Types:** Content Types are a way to organize and manage information within SharePoint. A Content Type defines the attributes and behavior of a type of content, such as a document or item in a list, and can be customized to meet specific business needs.
- **Metadata:** Metadata is data that describes content within SharePoint, such as the author, date created, or category. Metadata can be used to organize and manage content within SharePoint, and can be customized to meet specific business needs.
- **Business Connectivity Services (BCS):** BCS is a feature of SharePoint that enables users to connect to and interact with external data sources, such as databases, web services, or line-of-business applications. BCS can be used to integrate data from external systems into SharePoint, and enable users to work with that data within SharePoint.
- **Records Management:** Records Management is a feature of SharePoint that enables organizations to manage and preserve important records and documents. Records Management includes features for retention policies, hold policies, and eDiscovery, ensuring that important records are managed and preserved according to legal and regulatory requirements.
- **Office Web Apps:** Office Web Apps are online versions of Microsoft Office applications, such as Word, Excel, and PowerPoint, that can be used within SharePoint. Office Web Apps enable users to view and edit Office documents within SharePoint, without requiring the full desktop application.
- **Yammer:** Yammer is a social networking platform that is integrated with SharePoint. Yammer enables users to collaborate and share knowledge within SharePoint, and provides a social layer to SharePoint.
- **Power BI:** Power BI is a business analytics service that is integrated with SharePoint. Power BI enables users to create and share data visualizations and reports within SharePoint, and provides a powerful tool for business intelligence.
- **OneDrive for Business:** OneDrive for Business is a file storage and sharing service that is integrated with SharePoint. OneDrive for Business enables users to store and share files within SharePoint, and provides a convenient way to access and share files from anywhere.
- **App Catalog:** App Catalog is a feature of SharePoint that enables users to upload, manage, and deploy custom applications, add-ins, and solutions. App Catalog provides a centralized location for managing customizations and ensures that custom solutions are deployed in a controlled and secure manner.
- **Site Columns:** Site Columns are reusable fields that can be used to standardize data and promote consistency within SharePoint. Site Columns can be defined at the site collection level and used across multiple lists, libraries, and content types.
- **Content Query Web Part:** Content Query Web Part is a web part in SharePoint that enables

users to display content from across sites and lists within a single view. Content Query Web Part can be customized to filter, sort, and group content in various ways, enabling users to create powerful and flexible content rollups.

- **Managed Metadata:** Managed Metadata is a feature of SharePoint that enables users to define and manage a hierarchical set of terms, called a term set. Managed Metadata can be used to classify and organize content within SharePoint, and provide a powerful way to search and navigate content.
- **SharePoint Designer:** SharePoint Designer is a free tool provided by Microsoft that enables users to customize SharePoint sites and workflows. SharePoint Designer can be used to create custom workflows, edit master pages and page layouts, and create custom forms and views.
- **Office 365 Groups:** Office 365 Groups is a feature of SharePoint that enables users to collaborate with others across Office 365 services, such as Exchange, Teams, and SharePoint. Office 365 Groups provides a shared workspace for users to collaborate on documents, conversations, and tasks, and provides a powerful way to streamline collaboration and communication.
- **Power Apps:** Power Apps is a low-code development platform that is integrated with SharePoint. Power Apps enables users to create custom applications and forms within SharePoint, without requiring advanced coding skills. Power Apps provides a powerful tool for automating business processes and streamlining operations.
- **Power Automate:** Power Automate (formerly known as Microsoft Flow) is a cloud-based service that enables users to create custom workflows and automate business processes. Power Automate is integrated with SharePoint, and can be used to create powerful and flexible workflows that automate tasks, such as sending notifications, creating tasks, and updating data.
- **SharePoint Framework:** SharePoint Framework is a development framework that enables developers to create custom web parts and extensions for SharePoint. SharePoint Framework provides a modern and flexible approach to customizing SharePoint, and enables developers to use the latest web development technologies, such as React and TypeScript.
- **Site Templates:** Site Templates are pre-built site configurations that can be used to create new sites in SharePoint. Site Templates provide a convenient way to create sites that follow a specific design or structure, and can be customized to meet specific business needs.
- **Microsoft Search:** Search is a powerful feature of SharePoint that enables users to find and discover content across sites, libraries, and lists. SharePoint search includes features such as search scopes, refinement, and ranking, and can be customized to meet specific business needs.
- **SharePoint Add-ins:** SharePoint Add-ins (formerly known as SharePoint Apps) are custom solutions that can be installed and used within SharePoint. SharePoint Add-ins can be developed using web technologies, such as HTML, CSS, and JavaScript, and can provide a wide range of functionality, such as custom forms, custom lists, and custom workflows.
- **Information Rights Management (IRM):** Information Rights Management is a feature of SharePoint that enables organizations to protect sensitive content from unauthorized access or distribution. IRM includes features such as document encryption, document expiration, and document revocation, and can be used to ensure that sensitive content is secure and protected.

SharePoint

REST (SharePoint)

SharePoint Representational State Transfer (REST) service.

mindmap Root (REST in SharePoint) REST API Overview Protocol Format Endpoints Lists Sites Users Authentication OAuth App-Only Common Operations GET POST PUT DELETE Use Cases Data Retrieval Integration Custom Applications

REST (Representational State Transfer) is an architectural style that allows you to interact with SharePoint data using standard HTTP requests. SharePoint provides a RESTful web service that enables developers to access and manipulate SharePoint resources such as lists, items, and libraries in a straightforward and flexible manner.

Key Features of SharePoint REST API

- **Standard HTTP Methods:** Supports standard HTTP methods like GET, POST, PUT, and DELETE to perform CRUD operations.
- **JSON Format:** Data is exchanged in JSON format, making it easy to work with in JavaScript and other programming languages.
- **OData Protocol:** Supports OData (Open Data Protocol), allowing for rich querying capabilities, including filtering, sorting, and pagination.
- **Cross-Domain Requests:** Can be accessed from client-side code in browser scenarios using CORS (Cross-Origin Resource Sharing).

Common Use Cases

- Retrieving list items and document libraries.
- Creating new list items or libraries.
- Updating existing items.
- Deleting items from lists or libraries.
- Executing complex queries and fetching related data.

Basic Example

To retrieve items from a SharePoint list using the REST API, you would perform a GET request to the following endpoint:

```
GET /_api/web/lists/getbytitle('ListName')/items
```

This will return a JSON array of items in the specified list.

Authentication

Accessing the REST API in SharePoint typically requires authentication. Depending on the environment (on-premises or SharePoint Online), you may use:

- OAuth tokens (for SharePoint Online)
- NTLM or Kerberos (for on-premises SharePoint)
- [Microsoft Documentation on SharePoint REST API](<https://docs.microsoft.com/en-us/sharepoint/dev/sp-add-ins/working-with-lists-and-list-items-with-rest>)
- [OData Documentation](<https://www.odata.org/>)
- <https://docs.microsoft.com/en-us/sharepoint/dev/sp-add-ins/get-to-know-the-sharepoint-rest-service>

Example REST APIs:

- [Microsoft Graph API](#)
- <https://docs.microsoft.com/en-us/sharepoint/dev/apis/alm-api-for-spfx-add-ins>

Tools:

- [Postman](#)
- [SoapUI](#)

SharePoint

SPFx Extensions

With SharePoint Framework Extensions, you can customize more facets of the SharePoint experience, including notification areas, toolbars, and list data views.

3 types of SPFx extensions.

1. Application Customizers
2. Field Customizers
3. CommandSets

Application Customizers allow you to change fixed areas on a page or inject logic using JavaScript. Application Customizers provide access to well-known locations on SharePoint pages that you can modify based on your business and functional requirements.

Field Customizers allow you to control the rendering of any field in a SharePoint List.

CommandSets allow you to put custom commands in the toolbar.

[SharePoint](#)

SharePoint Framework (SPFx)

SharePoint client-side web parts are controls that appear inside a SharePoint page but run locally in the browser. They're the building blocks of pages that appear on a SharePoint site.

- [Overview of the SharePoint Framework](#)
- [Overview of SharePoint client-side web parts](#)
- [SharePoint Framework development tools and libraries](#)

<https://pnp.github.io/sp-dev-fx-webparts/>

<https://pnp.github.io/sp-dev-fx-webparts/samples/all/>

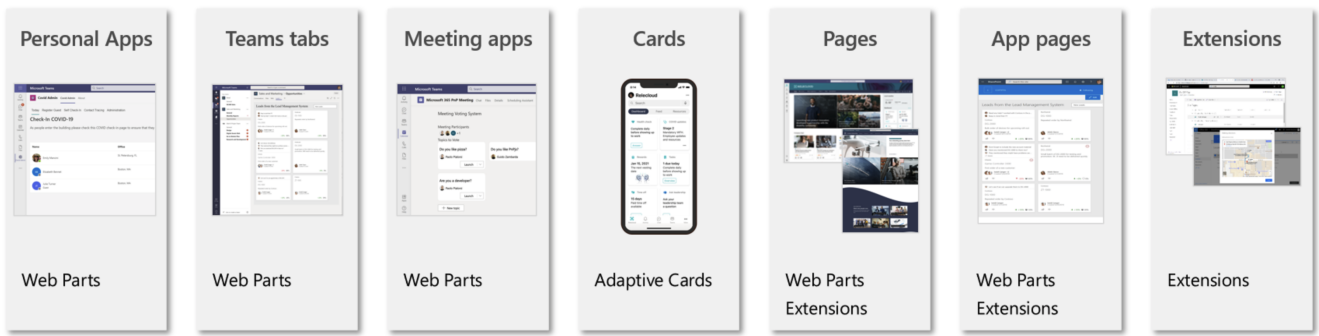

What is SharePoint Framework?

SharePoint Framework (SPFx) is a page and web part model that allows developers to create custom solutions for SharePoint Online, SharePoint Server, Microsoft Teams, and Microsoft Viva Connections. SPFx uses modern web technologies and tools such as Node.js, TypeScript, React, webpack, and gulp to provide a rich development experience and support for client-side SharePoint development. SPFx solutions are responsive, accessible, and secure by default. They can also integrate with SharePoint data and other Microsoft 365 services easily. SPFx is the recommended way to customize and extend SharePoint with code.

mindmap root((SharePoint Framework - SPFx)) Definition Modern development model Client-side development Components Web Parts Extensions Libraries Features TypeScript Node.js React Office UI Fabric Tools Visual Studio Code SharePoint Workbench Yeoman Generator Best Practices Follow coding standards Use reusable components Optimize performance Challenges Learning curve Compatibility issues Maintenance

FAQs ☆

Q When is it okay to murder a horse?
During battle! When you find yourself at war and the enemy horses sound their battle cry feel free to do some old fashioned horse murdering. Outside of that, however, you gonna end up in horse jail. Horse jail is sad so try and avoid it.

Q Where do I get replacement lasers?
What did you do to your lasers? SHAME SHAME SHAME upon you! Regardless, you can get new lasers at corporate HQ or by contacting the service desk and explaining your SHAME.

Q Can I have a hug?
Not Hugs are from the devil! How do horses even perform hugs?

Q What even am I?
You are a mighty beast, a true warrior, a frightening apparition of doom! Ya know... a horse!

Q How did I get here?
No idea, I'm just a list. Ask your mother.

tic-tac-toe

timeline

January 2022 (3) +

- 1/20/2022: I started online English conversation.
- 1/21/2022: Today I learned how to read numbers. And the teacher pointed out that I should open my mouth wider to improve my pronunciation. It was difficult to pronounce "thousand".
- 1/22/2022: Today's online English conversation was about shopping conversations. The role-playing we do at the end of the lesson is always a great fun for me. And I can only answer with words, not sentences.

February 2022 (28) +

- 2/1/2022: Today's lesson was practiced talking about popular hangouts. I also learned about the difference between "play" and "hang out". I only knew "play".
- 2/2/2022: Today's lesson was a review of the lessons I learned in days 9-12. Pronunciation is still very difficult. My teacher gave me a video recommendation for pronunciation practice.
- 2/3/2022: Today's lesson was practicing talking about a healthy diet. But I like junk food and alcohol, so I must find a chance to talk about

March 2022 (16) +

- 3/1/2022: Today's lesson was to practice asking and understanding shopping advice. Since the pandemic, I feel like I've been doing a lot of shopping online instead of going to the store.
- 3/2/2022: Today's lesson was an exercise in listening and speaking sentences with relative pronouns. If I need it, I understand it, but when I actually hear it, I get confused about where the verb or object is.
- 3/3/2022: Today's lesson was to practice talking about clothes. I learned for the first time that "A.M. shirt" is a humorous English word.

Session recordings

- Hybrid Operating**: Our necessary and exciting reimagining is now a change of digitalization. Today will talk about emerging technology trends and innovations across the Microsoft Cloud that will transform...
- Empower a new world of hybrid work**: The inherent shift to hybrid work is the biggest change to the way we work in a century. Emerging trends in the labor market have amplified the need for flexibility and a reimagining...
- Build a hyperconnected business**: In a rapidly changing world, there is no more "business as usual". The way we live and work will never be the same, and there is no clear roadmap for what's ahead. Organizations need...
- Understanding Newsletter Needs**: In this session, we would love to learn from you about the what, how, why, and for whom of using team content creation at work. We need to learn about your experience creating this.
- Programming Essentials for Beginners**: Have been learning high level with a good angle step that highlights how their passion and persistence got them to where they are today. From a software developer's perspective...
- A Beginner's Guide to Power Platform**: Looking to take your personal productivity within your company, but don't understand coding or IT? No problem. That's what Microsoft Flow, Power BI, and in this session, we'll walk you...
- Collaborating in a hybrid environment**: We are looking to learn about how you have stayed on top of work during the pandemic and beyond - when you've worked remotely with your team, what have you learned so far that you...
- Virtual Events with SharePoint Spaces**: The Microsoft SharePoint team has been working on ways to create a synchronous, multi-user experience when Spaces users are present together in the immersive environments they can create.

Webhooks

Webhooks in SharePoint are a way to receive notifications when certain events occur in SharePoint resources such as lists or libraries. They allow applications to subscribe to specific changes and get real-time updates without continuously polling the SharePoint API.

Key Features

- **Real-time Notifications:** Webhooks enable immediate notification of changes, improving the responsiveness of applications built on top of SharePoint.
- **Event-Driven Architecture:** Promote a decoupled architecture where applications respond to events rather than periodically checking for changes.
- **Support for REST APIs:** Webhooks are integrated into the SharePoint REST API, making it easier to manage subscriptions and handle events.

How Webhooks Work

1. **Subscription Creation:** An application registers a subscription by sending a POST request to the SharePoint REST API specifying the resource URL, the event type (e.g., item added, item updated), and the callback URL where notifications should be sent. 2. **Event Occurrence:** When the specified event occurs (e.g., a new item is added to a list), SharePoint triggers the webhook. 3. **Notification Sent:** SharePoint makes a POST request to the callback URL provided in the subscription with details about the event. 4. **Handling Notification:** The application receives the notification and can process it accordingly, such as updating its internal state or triggering further actions.

Event Types

Common SharePoint event types that can trigger webhooks include:

- Item added
- Item updated
- Item deleted
- List created
- List properties changed

Subscription Management

- **Creating a Subscription:** Use the POST method to create a subscription. - **Retrieving Subscriptions:** Use the GET method to retrieve existing subscriptions. - **Deleting a Subscription:** Use the DELETE method to remove an existing subscription.

Important Considerations

- **Security:** Ensure that the callback URL is secure and can validate incoming requests.
- **Expiration:** Subscriptions have an expiration time, usually set at six months, which means they need to be renewed periodically.
- **Reliability:** Applications should handle potential delivery failures and implement retries as necessary.
