

GitLab

<https://about.gitlab.com/>

GitLab is a complete DevOps platform, delivered as a single application. From project planning and source code management to CI/CD, monitoring, and security.

GitLab (<i>almsuit</i>)	
Full Name	GitLab
Short Name	GitLab
Company	GitLab
Web	https://about.gitlab.com/

Snippet from [Wikipedia](#): **GitLab**

GitLab is a web-based DevOps lifecycle tool that provides a Git-repository manager providing wiki, issue-tracking and continuous integration/continuous deployment pipeline features, using an open-source license, developed by GitLab Inc. The software was created by Ukrainians Dmitriy Zaporozhets and Valery Sizov, and is used by several large tech companies including Juniper, Cisco, IBM, Sony, Jülich Research Center, NASA, Alibaba, Oracle, Invincea, O'Reilly Media, Leibniz-Rechenzentrum (LRZ), CERN, European XFEL, GNOME Foundation, Boeing, Autodata, NVIDIA, and SpaceX.

The code was originally written in Ruby, with some parts later rewritten in Go, initially as a source code management solution to collaborate with his team on software development. It later evolved to an integrated solution covering the software development life cycle, and then to the whole DevOps life cycle. The current technology stack includes Go, Ruby on Rails and Vue.js.

It follows an open-core development model where the core functionality is released under an open-source (MIT) license while the additional functionality is under a proprietary license.

GitLab is considered the first Ukrainian unicorn valued more than \$1 billion.
