Test automation 3

Test automation

https://en.wikipedia.org/wiki/Test_automation

Snippet from *Wikipedia*: **Test automation**

In software testing, **test automation** is the use of software separate from the software being tested to control the execution of tests and the comparison of actual outcomes with predicted outcomes. Test automation can automate some repetitive but necessary tasks in a formalized testing process already in place, or perform additional testing that would be difficult to do manually. Test automation is critical for continuous delivery and continuous testing.
